

# CommonSensing Platform Solutions

Building **climate  
resilience** with  
small island nations

LEBA GAUNAVINAKA  
UNOSAT Programme, UNITAR

# Outline

- CommonSensing Project
  - Objectives, Deliverables, Implementing Partners
- Progress Update
  - ❖ Services provided
  - ❖ Platform solutions
  - ❖ End- User testing
- Concluding remarks

# Background:

- CommonSensing is a three year project that the Fijian Government has embarked on based on a partnership with the UK Space Agency's International Partnership Program (IPP)
- CommonSensing Project is aimed at leveraging satellite technology and satellite derived products to support Commonwealth SID nations in the Pacific - Fiji, Vanuatu and Solomon Islands in four thematic areas

Enhanced Resilience  
to Climate Change

Enhancing  
Food Security

Disaster Risk Reduction  
from Natural Hazards

Improving access to  
Climate Finance

# Implementing Partners:

- CommonSensing is implemented by a Consortium of International partners lead by the United Nations Institute for Training and Research (UNITAR)

United Nations Operational Satellite  
Applications Programme (UNOSAT)

United Nations Institute for Training and  
Research (UNITAR)

UK Meteorological Office

The project strengthens climate resilience by;

- **Developing geospatial and climate information and systems** that meet identified challenges and needs for each country for decision support.
- **Strengthening access to climate finance** and report on climate funds including national and regional climate action policy

CommonSensing support consists of two elements:

Geospatial, climate  
information and  
decision making tools

Capacity Development for:  
Technical staff , Specialised analysts, Decision  
makers

CommonSensing focuses primarily on supporting the centralised stakeholders and decision makers within the national government.

# Stakeholders

1. Climate Change & International Cooperation Division, Ministry of Economy
2. Ministry of Lands & Mineral Resources
3. National Disaster Management Office
4. Fiji Meteorological Services
5. Ministry of Agriculture
6. Ministry of Sugar Industry
7. Ministry of Waterways & Environment

With Government ITC Data Centre as core enabler

\* Note: Secondees from MLMR, MoA, NDMO

*However, the landscape is vast and many more stakeholders are acknowledged as potential beneficiaries and collaborators to the CS service, including other governmental organizations, regional organizations and end-user communities.*

# Thematic Technical Trainings

# Thematic Technical Training

COMMONSENSING

## Climate Learning for Adaptation and Resilience' (CLEAR) Workshop, 7-11 October 2019 at Nadi, Fiji

- ✓ Regional workshop conducted by **UK Met Office** that brought together experts from Solomon Island, Vanuatu, and Fiji Meteorological services;
- ✓ Targeted Met experts using or aiming to use long-term climate projections in their work;

March 10-12, 2020, Port Villa.

# Thematic Technical Training

## CommonSensing Workshop - 4-8 November, 2019 at USP

**Data Gathering from the Web,**  
download and use data for DRR  
and Climate Applications

- USGS Earth Explorer
- EO Browser
- Copernicus Sentinels Scientific Data Hub
- Giovanni
- Digital Globe / Maxar
- The Humanitarian Data Exchange
- ArcGIS Online
- OSM and BBBike
- World Pop
- Maps and Data from UNSOAT archives

**Basic Remote Sensing Operations with ArcMap**

- Band Combinations
- NDVI calculations
- Image Enhancements

**ArcGIS 1 year license for**

# Advanced EO & GIT Training

## Modules

1. Change detection with GEE
  1. Water bodies
  2. Land use land cover
  3. NDVI
2. Digital Image Classification
3. Supervised & Unsupervised classification (LULC)
3. Rapid mapping response
  1. Population exposure analysis
  2. Sources of data (OpenSource, Local authoritative)
  3. Infographics
4. Geodatabase management
  1. Topology, domains and subtypes
  2. Webmapping

**ArcGIS 1 year license** for participants

# Technical support (backstopping services)

# Earthquake induced landslide susceptibility map (shared with NDMO & MRD)

Earthquake Induced Landslide Susceptibility Mapping

World Elevation Data 30-meter from The Japan Aerospace Exploration Agency (JAXA) was used to create the slope map.

Esri, HERE | Esri, NASA, NGA, USGS | UNOSAT

Geologic Group		Slope Angle, degrees					
		0-10	10-15	15-20	20-30	30-40	> 40
(a) DRY (groundwater below level of sliding)							
A	Strongly Cemented Rocks (crystalline rocks and well cemented sandstone, $c' = 300$ psf, $\phi' = 35^\circ$ )	None	None	I	II	IV	VI
B	Weakly Cemented Rocks and Soils (sandy soils and poorly cemented sandstone, $c' = 0$ , $\phi' = 35^\circ$ )	None	III	IV	V	VI	VII
C	Argillaceous Rocks (shales, clayey soil, existing landslides, poorly compacted fills, $c' = 0$ , $\phi' = 20^\circ$ )	V	VI	VII	IX	IX	IX
(b) WET (groundwater level at ground surface)							
A	Strongly Cemented Rocks (crystalline rocks and well-cemented sandstone, $c' = 300$ psf, $\phi' = 35^\circ$ )	None	III	VI	VII	VIII	VIII
B	Weakly Cemented Rocks and Soils (sandy soils and poorly cemented sandstone, $c' = 0$ , $\phi' = 35^\circ$ )	V	VIII	IX	IX	IX	X
C	Argillaceous Rocks (shales, clayey soil, existing landslides, poorly compacted fills, $c' = 0$ , $\phi' = 20^\circ$ )	VII	IX	X	X	X	X

## Earthquake Induced Landslide Susceptibility Mapping, Fiji

A landslide susceptibility map was prepared using the geological classes and slop steepness.

[Wilson & Keefer 1985 method]

# Technical Support/Capacity Development

## Fiji Missing Mapathon Mapathon, 26-28 August 2019, Suva, Fiji

- ✓ Jointly organized by UNOSAT, USP and MOE

*Mapathon aimed to engage government stakeholders and academia to map out unmapped infrastructure and other critical information to support disaster preparedness efforts.*

- ✓ Experienced mapathon expert from OSM Asia Pacific Office in Indonesia was engaged to conduct the event;
- ✓ 51 Participants (40%F, 60%M) mapped out **3148 buildings**, **83 highways**, **66 land-uses** and **6 waterways** and are updated and made available on the OpenStreetMap

**Further updates on missing buildings within 34 identified red zones**

Tropical Cyclone

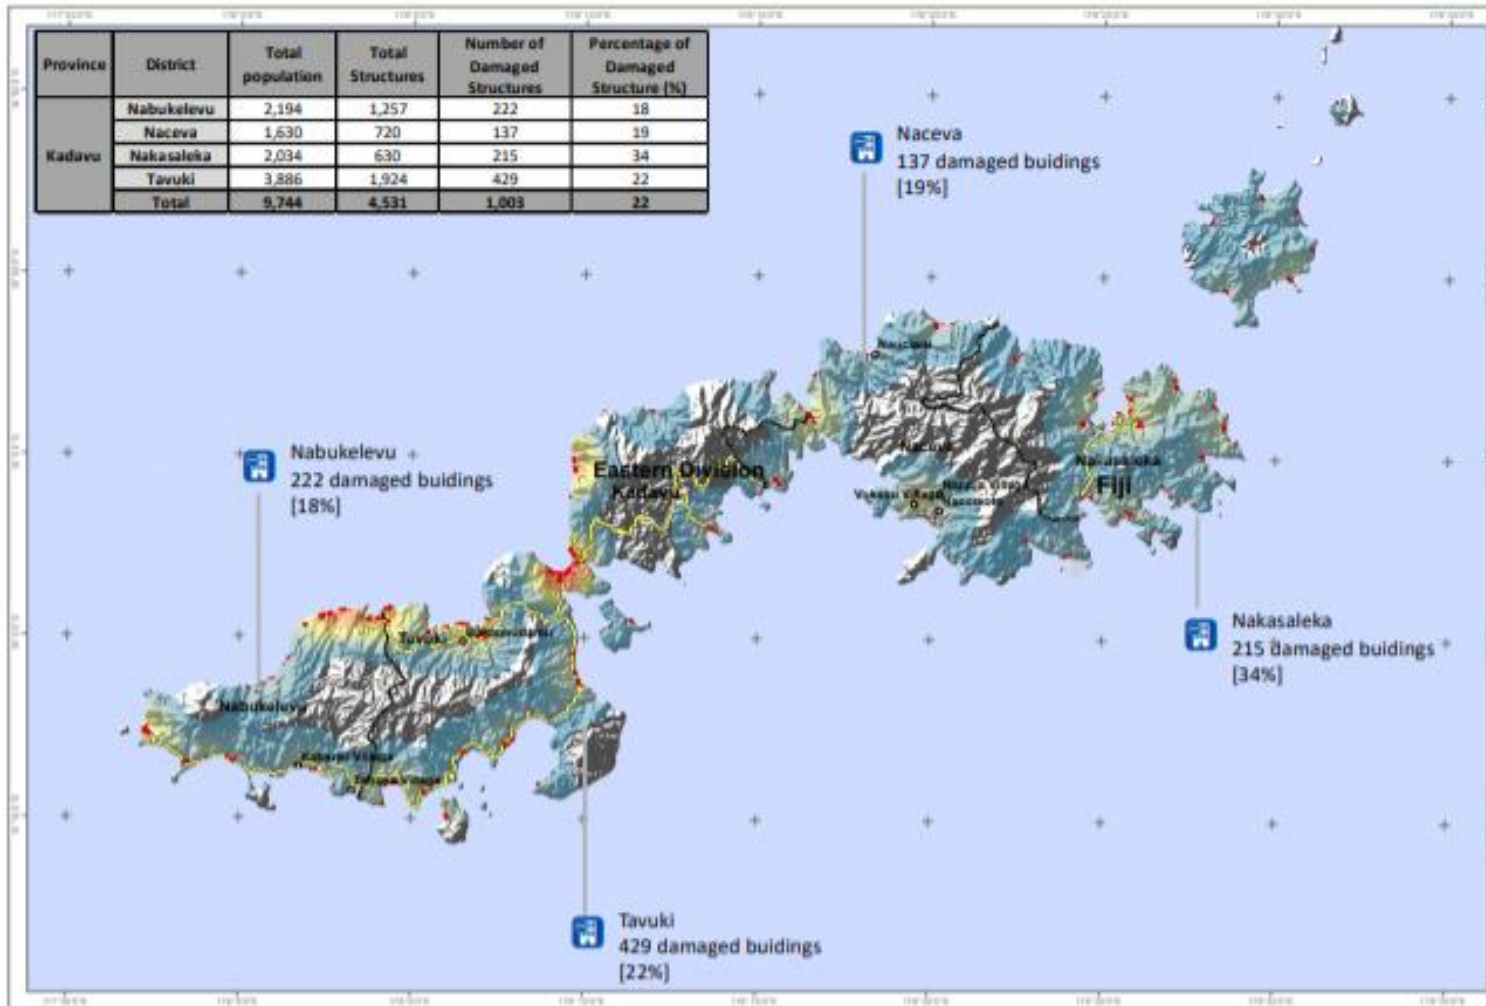

TC20200406FJ

## Buildings Damage Assessment & Related Density in Kadavu Province, Eastern Division, Republic of Fiji

This map illustrates potentially damaged structures, buildings and their related density in Kadavu Province, Eastern Division, Republic of Fiji as detected by satellite images acquired on 12 April 2020. Within the Kadavu Province, UNITAR-UNOSAT identified in the cloud free zones 1,003 potentially damaged structures. Taking into account the pre-building footprints provided by OpenStreetMap, this represents about 22% of the total number of structures within the analyzed cloud free areas.

This is a preliminary analysis and has not yet been validated in the field. Please send ground feedback to UNITAR - UNOSAT.

*UNOSAT can activate the space charter during emergencies to support rapid response mapping.*

## Fiji Mangrove Map

Fiji Mangrove map is provided by the United Nations Institute for Training and Research (UNITAR) Operational Satellite Applications Program (UNOSAT) hosted at the European Organization for Nuclear Research (CERN) in Geneva, Switzerland. UNOSAT provides satellite imagery analysis and related geographic information to UN humanitarian and development agencies and their implementing partners.

**Request Description:** Mangrove Mapping

**Requesting Organisation:** Ministry of Forests

**Thematic Area:** Geospatial Information Technologies

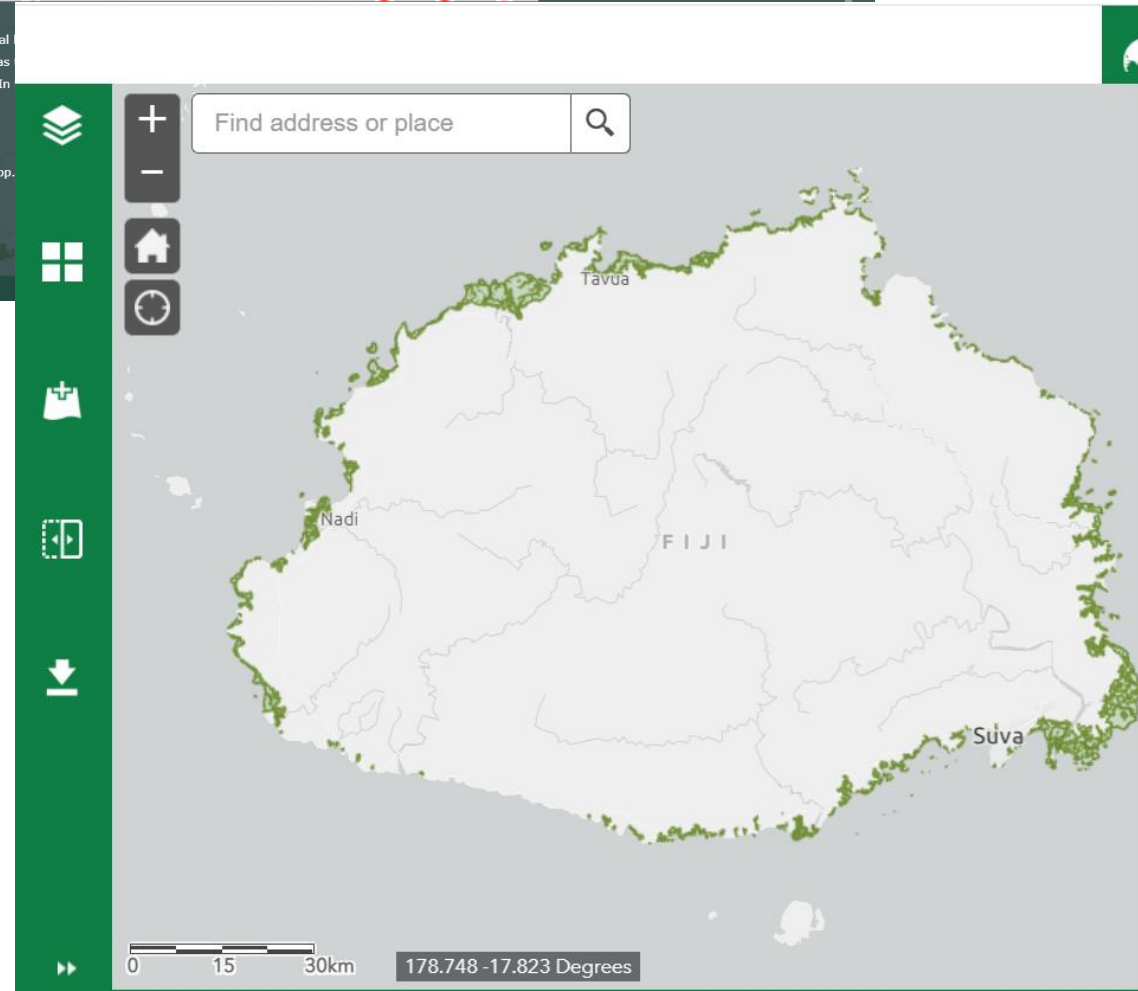

**Support Details:** UNOSAT is using sentinel 2 multi-spectral satellite imagery to digitise latest mangrove boundary

1. **Layer List** - provides a list of operational layers and their symbols, and allows user to turn individual
2. **Basemap Gallery** - presents a gallery of basemaps and allows user to select one from the gallery as
3. **Add/Upload Data** - allows user to add data to the map by entering URLs, or uploading local files. In
4. **Swipe** - enables user to easily compare the content of different layers in a map.
5. **Download Data** - allows user to download data in Shapefile format.
6. **Search** - enables end users to find locations or search features on the map.
7. **Bookmark** - stores a collection of map view extents (that is, spatial bookmarks) displayed in the app.

# The OpenDataCube

# The Data Cube

- CommonSensing is using the open source [Open Data Cube](#) (ODC) technology developed by Geoscience Australia as our solution for the storage of satellite Analysis Ready Data (ARD) and derived products.
- A Data Cube for EO data, is the concept of creating a multi-dimensional array database to store standardised raster data and metadata.
- Once ARD raster data is ready and stored within the Data Cube, algorithms can then be run on the Cube to query it spatially or temporally (or both) to create data products from the ARD source imagery.

© Australian Geoscience Data Cube, 2016

# Technologies needed

- At its core, the Data Cube is simply a set of Python libraries and a PostgreSQL database now engineered for it to scale to operate at national level
- To do this, a number of technologies are used including [DASK](#), [Xarray](#), [Docker](#), [Kubernetes](#), S3-type Buckets

© Australian Geoscience Data Cube, 2016

# CommonSensing and the Data Cube

- Deployed a number of Cube environments for development, testing and production.
- Loaded Sentinel-1, Sentinel-2 and Landsat ARD data into the Cube for all 3 Pacific islands nations (Fiji, Vanuatu and Solomon Islands).
- Developed a Data Cube API to allow users to access and use the Cube from within their GIS App.
- Developed a number of Data Cube products.

# Data Cube Products Overview

## ARD

- Sentinel-2 ARD
- Landsat ARD
- Sentinel-1 ARD
- Water Masks

## Routine

Routine products are pre-generated at set time intervals, designed to save time and compute on commonly used products.

- Geomedian
- Shoreline Extraction
- Water Permanency
- Fractional Cover

## On-Demand

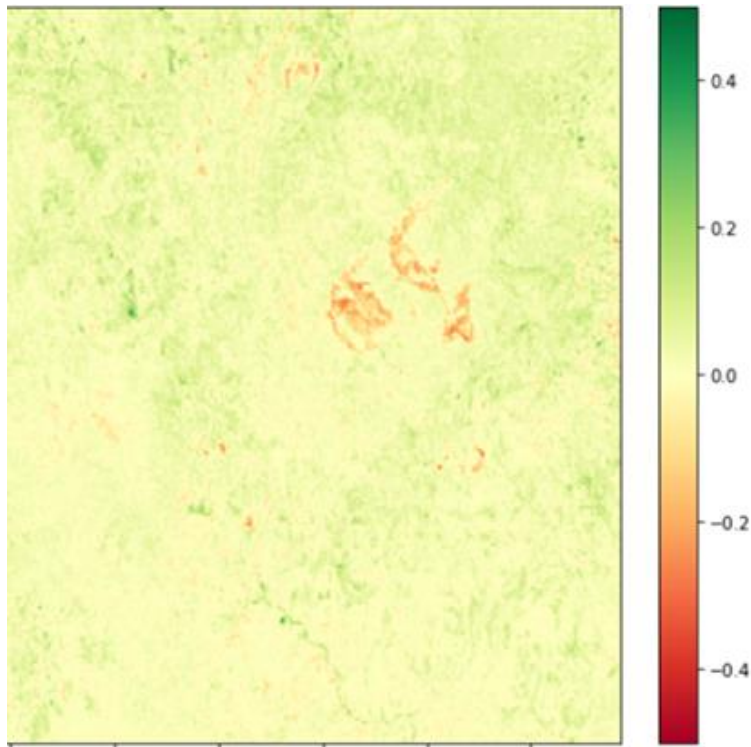

These products are generated based on user-defined inputs such as time periods, and area.

All Routine Products +

- Water Change
- Aggregate Indices
- NDVI Anomaly
- Vegetation Change
- Land Degradation
- Water Quality

# NDVI Anomaly

On-Demand

## Sensors:

- Sentinel-2
- Landsat series

## Query Parameters:

Analysis Sensor

Area of Interest

Mosaic Type

## Description:

The Normalised Difference Vegetation Index (NDVI) represents the chlorophyll content of a surface – the 'greenness'. This product represents the change of NDVI between two user-defined time periods. Areas of positive change represent an increase in vegetation on the surface, whilst negative values represent a decrease.

## Use Cases:

Analyse long-term or abrupt land use changes, natural seasonal variances may exist, so need to be cautious when choosing date ranges that you are experiencing actual change not seasonal.

## Cube Process:

Resolution

## Description:

Fractional Cover is a land cover product based upon three fractions:

- Bare Soil (Red)
- Photosynthetic vegetation (Green)
- Non-photosynthetic Vegetation (Blue)

The fractions are represented as an RGB image, where the color represents the dominance of each fraction within a pixel.

## Use cases:

This land cover product can be used to look at static land cover which could be useful for planning and impact assessment.

Water Threshold

Tidal Range

Area of Interest

## Description:

The shoreline is derived from detecting the waterline in each image captured over the year, then determining the average shoreline position. This product can be filtered to only use images for a certain tidal range based on tide timetables, as well as number of vectors.

## Use Cases:

The annual shoreline location can be used to inform on changing long-term trends in coastline. This may be due to areas of high erosion, deposition or/and rising sea levels. This product could be used to aid decision making on construction of infrastructure such as sea walls or identification of vulnerable communities.

# CONCLUSIONS

Good datasets are required to better support hazard modelling and risk assessments.

Strengthening partnerships, collaboration, communication and inclusion to support resilience and sustainable development.
